WORK HISTORY

Dometic Marine

System Administrator

IT Technician

Sparta, TN

September 2025 – Present

June 2025 – August 2025

- Oversee end-to-end infrastructure, Enterprise Resource Planning (ERP) systems, and security operations for a 100+ user manufacturing facility, ensuring continuous uptime and business continuity.
- Administer hybrid-cloud identity and endpoint infrastructure, including Azure Active Directory, Intune device configuration/compliance policies, conditional access, and secure identity lifecycle management.
- Act as the sole technical point of contact for all external IT vendors—including CISTECH (ERP), Novatech (print services), TL Ashford (labeling), and multiple hardware/software partners coordinating escalations, contract support, and systems integration.
- Manage and maintain critical on-premise infrastructure such as Windows Server, SQL Server, print servers, employee kiosk systems, and production-supporting services across the facility.
- Reverse engineer and support undocumented legacy and custom-built software solutions to restore functionality, eliminate bottlenecks, and sustain essential business workflows.
- Maintain IBM i (AS/400) daily and weekly tape backups, oversee off-site storage rotation, and ensure compliance with organizational disaster recovery and data retention standards.
- Lead license renewals, access provisioning, troubleshooting, and configuration for the Infor XA (MAPICS) ERP system in a no-documentation environment, establishing operational stability from scratch.
- Plan and execute a site-wide Windows 11 deployment, including imaging, Intune configuration profiles, Azure AD join/role management, pilot testing, and full user transition support.
- Troubleshoot complex TL Ashford / Barcode400 label-generation workflows and Zebra printer integrations involving ERP triggers, network services, and device-level configurations.
- Serve as the primary support technician and escalation point for all on-site IT issues, reducing the inherited ticket backlog from 65+ to under 15 within one month while maintaining near-zero downtime.
- Manage physical-security technologies including RFID access control, IP-based camera systems, and secure system integrations with facility IT infrastructure.
- Represent the Sparta facility in global infrastructure stand-ups, lead meetings in the absence of senior leadership, and contribute to long-term modernization and infrastructure planning.
- Write and maintain comprehensive IT Standard Operating Procedures, user documentation, and operational workflows to preserve institutional knowledge, standardize processes, and ensure resilience during personnel turnover.

CERTIFICATIONS

CompTIA Security+ (SY0-701)

CompTIA

November 2025

Foundations of Git

GitKraken

September 2023

PROJECTS

Capstone Project

Naval Surface Warfare Center Dahlgren Division

Cookeville, TN

October 2024 – May 2025

- Leveraged the Android Tactical Assault Kit framework to develop a Command and Control (C2) plugin for unmanned surface vessels.
- Designed a modular C2 system to enable real-time operations, route planning, and multi-operator coordination for unmanned vessels.
- Led a team of five as Scrum Master, managing project timelines and ensuring effective communication with stakeholders.

Cyber Resiliency and Measurement Challenge (CRAM)

Naval Surface Warfare Center Dahlgren Division

Dahlgren, VA

September 2024 – October 2024

- **Automated PDF Processing and Data Extraction:** Implemented OCR and table extraction to capture and organize data from large-scale PDFs, including CVEs, hardware, and software.
- **AI-Driven Vulnerability and Criticality Scoring:** Developed a custom algorithm to extract and correlate CVEs with critical system functions, factoring in severity, criticality, and system vulnerabilities.
- **Physical and Cyber Infrastructure Scoring:** Built models with Llama3 and RAG to assess system resilience based on public policy data.
- **Dynamic System Testing and Real-Time Scoring:** Created environments for testing varied resilience levels, with real-time score adjustments based on CVE resolution and user-selected APTs via a user-friendly GUI.

TECHNICAL SKILLS

- **Infrastructure & Systems:** Windows Server, Active Directory, Azure AD, Group Policy, Intune, SQL Server, AS400, print servers, and on-premises/remote server administration
- **Cybersecurity:** Endpoint protection, user compromise response, phishing remediation, vulnerability triage, threat detection, access control, and internal cybersecurity awareness training
- **ERP & Enterprise Systems:** Infor XA (MAPICS), TL Ashford, Barcode400, DocuWare, and experience reverse engineering undocumented custom enterprise software
- **Networking:** LAN/WAN support, TCP/IP, VPN, DNS, RFID systems, security camera infrastructure, and vendor-based network troubleshooting
- **Programming:** Java, Python, C++, C#, Bash, SQL; working knowledge of HTML, CSS, JavaScript, Dart, Assembly, Flutter
- **Tools & Platforms:** Git, Docker, Visual Studio Code, Google Cloud Platform (GCP), JGrasp, PyCharm, Microsoft 365 Admin Center
- **Operating Systems:** Windows 10/11, Windows Server (2016–2022), Ubuntu, Debian, and experience with kiosk and embedded systems

ACCOMPLISHMENTS

- Finalist, Naval Surface Warfare Center Dahlgren CRAM Challenge
- Top 10 of 413 teams, Hivestorm National Cybersecurity Defense Competition
- National Touring Member, The Cavaliers Drum and Bugle Corps, Madison Scouts Drum and Bugle Corps

EDUCATION

Tennessee Tech University

Bachelor of Science in Computer Science

Concentration: Information Assurance and Cybersecurity

Minor: Social Sciences

Cookeville, TN

August 2023 – May 2025

Columbia State Community College

Associate of Science in Computer Science

Franklin, TN

January 2021 – July 2023
